(54) DOCUMENT PRINTING SYSTEM ON REMOTE PLACE

(57)Abstract:

PROBLEM TO BE SOLVED: To reduce the load of a communication line due to the transmission/ reception of document information between computers on a printing requesting side and a printing execution side and to secure the synchronization of document information at the time of printing.

SOLUTION: Document information is stored in a printing computer 2 and information whether document information used for the preparation of printing data exists at the time of printing or not is checked. When the document information exists, printing is executed by using the document information. Only when the document information is not included, the document information is sent from a printing request computer 1 to the computer 2 through a communication line 26 to execute the printing processing of the document.
